**“TREATMENT OF CELLULITE WITH MID-INFRARED LASER”
PATENT ALLOWED BY USPTO TO COOLTOUCH INC.**

Roseville, CA (April 5, 2007) – CoolTouch Inc., a pioneering manufacturer of medical lasers announced today that the United States Patent & Trademark Office has allowed the patent “Treatment of Cellulite with Mid-Infrared Radiation” to CoolTouch Inc. The inventors of the patent are David R. Hennings, CoolTouch CEO and Mitchel P. Goldman, M.D., of La Jolla Spa MD. The patent covers the non-invasive and percutaneous treatment of cellulite and fatty tissue in a novel fashion, and is assigned to CoolTouch Inc. This method is implemented in the new 1320 nm CoolTouch CoolLipo™ laser system.

“The very short pulse length and high peak power allows fat to be ablated and liquefied with minimal side effects,” states David Hennings. “This patent announcement arrived just in time for the international launch of our new CoolLipo 1320 nm laser system.”

The CoolLipo 1320 laser is designed to ablate fat in areas such as the neck, chin and arms and improves the outcome of conventional liposuction in larger areas such as the abdomen and thighs. In addition, the unique 1320 nm wavelength tightens the skin from the inside out by directly targeting collagen and connective tissue. The CoolLipo procedure is performed in a physician’s office under local anesthesia. Patient benefits include minimal, if any bruising, and less recovery time and cost than a face or neck lift.

“The latest patent from CoolTouch strongly demonstrates their commitment to developing new techniques and technologies for cosmetic procedures,” states Mitchel P. Goldman, M.D. “The CoolLipo laser is an exciting new addition to my cosmetic surgery practice; providing easier, more effective treatments and delivers a better patient experience.”

The CoolLipo laser system is cleared for general dermatological surgery and is distributed internationally by GlobalMed Technologies based in Sonoma, California. A 510(K) is pending for FDA clearance to market the CoolLipo specifically for laser-assisted lipolysis.

About CoolTouch

CoolTouch Inc. located in Roseville, California designs, manufactures and markets light-based aesthetic and medical products with a firm commitment to continuing innovation and excellent customer service. The CoolTouch Nd:YAG product line includes: the CoolTouch CT3PLUS™ 1320 nm with CoolBreeze™ mode for painless acne and wrinkle treatment for all skin types, The CoolTouch VARIA™ 1064 nm, providing safe and effective treatment for hair removal, vascular conditions and skin tightening and the CoolTouch CTEV™ 1320 nm endovenous laser for treatment of varicose veins.
